NANDHU S

Backend/Fullstack Engineer

nandhus1810@gmail.com nandhu.wiki https://github.com/iamnandhu +91 730653166 Kerala, India

SKILLS

Backend: Go (Golang), Python, TypeScript, Gin, FastAPI, RESTful APIs, gRPC, Distributed systems.
Frontend: Angular Js, HTML, Tailwind, Typescript/Javascript, API integrations.
Databases & Caching: DynamoDB, MongoDB, Redis, Memcached
Cloud & Infrastructure: AWS, Kubernetes, Docker, CI/CD; production operations and incident/debugging.
AI-Assisted Development: Cursor IDE, Claude Code, GitHub Copilot, prompt engineering for code generation, AI-powered debugging, automated test generation, documentation automation

EXPERIENCE

Software Engineer | **Backend/Fullstack** Jan 2023 - Present
Falconfeeds.io (Technisanct)

- Led backend engineering team through organizational restructure, maintaining 100% sprint velocity by mentoring engineers, establishing code review processes, and architectural decisions to build systems that are scalable.
- Created database designs, technical design documentations, and API specifications.
- Optimized analytics endpoints from 2-3 seconds to sub-second latency by designing and deploying Memcached caching layer as Kubernetes pod with intelligent cache invalidation strategies.
- Built an MCP server for the product around core APIs that increased API consumption, driving ~35% customer conversion to Pro subscription and ~$100,000 in new revenue via higher credit purchases.
- Expanded platform adoption and integrations by launching Telegram, Slack, MS Teams and Email threat incident alert notifications and adding support STIX/TAXII and Splunk interoperability for official threat-intel community integrations.
- Designed a real-time Telegram threat-actor/criminal channel monitoring pipeline ingesting messages from 25,000+ channels with 50–100ms latency.
- Built an AI incident-threat actor analysis feature end-to-end that generated visual reports and insights, reducing investigation time by 70% for researchers.

PROJECTS

Falconfeeds MCP server Github |

- Built an MCP server that enabled AI assistants to fetch on-demand threat intelligence (dark web + open web) via FalconFeeds APIs.
- Packaged the MCP server as a public npm module to simplify customer setup and adoption in production AI workflows.

GoMail Git

- Built GoMail, a lightweight SMTP client library in Go for sending and receiving emails with minimal dependencies.
- Published GoMail as a reusable package designed for easy integration into backend services.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering Jun 2018 – Aug 2022

APJ Abdul Kalam Technological University (KTU), Kerala, India
